LOCATION
Ho Chi Minh City, Vietnam

SKILLS

GAME DESIGN
Systems & Skill Design · Game Balancing · Economy & Monetization · Campaign & Level Design · Enemy & Boss Design · Live-ops Config

TECHNICAL
Unity · C# · C++ · PureMVC · Data-driven Design · Localization

TECHNICAL ART
Maya · VFX · Shaders & GPU Instancing · Animation & Rigging

TOOLS
Git · Azure PlayFab · Firebase · Claude Code

EDUCATION

2020 – 2022
Yoshida Technology and Business College
Master Degree of Game Making

2013 – 2018
Nguyen Tat Thanh University
Bachelor of English Translation and Interpreting

LANGUAGES

Vietnamese (Native)

English (Fluent)

Japanese (Fluent)

PROFILE

Game Designer and Technical Designer with 4+ years of experience in mobile action-roguelike and tower defense games. I design and balance the systems players spend their time in, from hero skills and boss encounters to campaigns, progression, and economy, and build them myself in Unity so ideas reach the game quickly. With a technical art background in VFX, shaders, and animation, I take content from concept through the 3D pipeline to a balanced, shippable release.

WORK EXPERIENCE

Imba Games Studio
2022 – Present

Game Designer · Technical Designer

Designer and Unity developer across five mobile titles, from live action-roguelikes to tower defense.

Samkok Heroes TD
Jul 2025 – Present · Team of 4

Game Designer · Technical Designer · Technical Artist

- Designed and balanced the Normal and Elite campaigns up to **90 chapters**: maps, waves, formations, mobs, elites, bosses, rewards, and staged unlocks, all driven by 550+ config files.
- Rebalanced chapters 46–90 by separating monster HP from wave density, smoothing the difficulty spike at chapters 46–48, and setting a difficulty curve through chapter 90. Reworked the chapter reward curve and fixed the gear tier calculation.
- Designed the Trial of Strength and Conquest modes, the Monopoly minigame, Rookie Quest, and login rewards, and structured the IAP offering (starter and special packs, VIP cards, battle pass, chapter fund).
- Designed hero skill unlock logic and multi-phase boss and elite AI, and produced 3D content (models, animation, VFX, AnimMap shader) for new heroes, monsters, and bosses.

Dynasty Archer
2022 – Present · Team of 5–10

Technical Designer · Unity Developer

- Built or completed **18+ heroes** end to end, from custom-logic skills (clone summoning, life drain, channeled casts) to projectiles, VFX, voice, hero select, try-hero mode, and shard config.
- Designed and built the **mount system** (10+ mounts, mount skills, and UI) as a second progression layer.
- Completed chapters 1–18 with new monster AI and boss sets, designed the Lu Bu World Boss (mechanics and damage balance), and balanced heroes for PvP.
- Ran release config and localization (including Japanese) for chapters, heroes, and shards.

WORK EXPERIENCE · Imba Games Studio, continued

Archer Hunter

Aug 2023 – Feb 2026 · Team of ~20

Gameplay Developer · Technical Artist

- Reworked Katherine, Swift, and Ares, rebuilt Lynn, Vixen, and Goku from scratch (active and passive skills, clone skills, VFX, portraits), and rebalanced Master Lynn and Iris.
- Built the NFT Heroes set (Saiyan, Iris, Wukong) end to end, and the **Jewelry system** as a full feature: leveling, merging with costs, stat display, four UI iterations, and 11 skills.
- Delivered three World Bosses (AI, VFX, colliders, stat balance), plus the NFT Shop and Nika Quest.

Heroes Survivor

Jun 2023 – Oct 2024 · Team of 5–10

Unity Gameplay Developer

- Created **20+ bosses** with unique AI, bullet patterns, and a precast warning system. Reworked chapter 1, 2, 3, and 5 bosses and fixed behavior across dozens of enemy IDs.
- Added new heroes, skills, evolutions, and pets, and delivered four seasonal events (Halloween, Thanksgiving, Noel and New Year, Lunar New Year), each with its own boss, elite, creep, VFX, and config.
- Optimized for mobile: texture and mesh size, draw calls, VFX, and Adaptive Performance. Integrated Zendesk Support.

Nam Quốc Sơn Hà

Jun 2026 – Aug 2026 · Team of ~10

Technical Artist · Gameplay Developer

- Wrote state-machine AI, weapons, and projectiles for elites and bosses across chapters 2–6 (40+ scripts).
- Produced models, animation, textures, and AnimMap shader updates, and contributed to a Claude Code skill that clones enemy setups to speed up content creation.

Innovation Factory

2017 – 2018

Japanese Translator

- Interpreted at in-person and video conferences, preserving the original style, tone, meaning, and intent.
- Proofread and copy-edited Vietnamese and Japanese documents.
